realizing the importance and fragility of the world's ecosystems is critical for today's students. Acid rain, global warming, the endangerment and extinction of a variety of plants and animals are real threats to our very survival. Our unit takes a close look at the different habitats that make up the world's ecosystems and the components of these habitats that make them unique. Our unit also examines aspects such as the adaptation of plants and animals to change and the infringement of civilization. It is hoped that students will not only gain a better understanding of the world they live in but may also be more concerned with protecting the fragile environment of which we are all a part. This animal science lesson provides a teacher and student section with a variety of reading passages, activities, crossword, word search, and answer key to create a well-rounded lesson plan.

This book constitutes the refereed proceedings of the 17th International Conference on Artificial Intelligence in Education, AIED 2015, held in Madrid, Spain, in June 2015. The 50 revised full papers presented together with 3 keynote, 79 poster presentations, 13 doctoral consortium papers, 16 workshop abstracts, and 8 interactive event papers were carefully reviewed and selected from numerous submissions. The conference provides opportunities for the cross-fertilization of approaches, techniques, and ideas from the many fields that comprise AIED, including computer science, cognitive and learning sciences, education, game design, psychology, sociology, linguistics, as well as many domain-specific areas.

This conference promises to be both informative and stimulating. With a wonderful program, delegates will have a wide range of sessions to choose from and will have a difficult time choosing which session to attend. The program consists of invited sessions, technical workshops, and discussions covering a wide range of topics in social science, including communication, culture, economics, education, finance, law, management, politics, psychology, and society. This rich program provides all attendees with the opportunities to meet and interact with one another. We hope that your experience with AIED 2014 is a fruitful and long-lasting one.

Decoding the Conversion: 99 Inches to Feet

Understanding unit conversions is crucial in various fields, from construction and engineering to everyday tasks like sewing or baking. One common conversion involves inches and feet, the imperial units of length. This article aims to simplify the process of converting 99 inches to feet, explaining the underlying principle and providing practical examples.

1. Understanding the Relationship Between Inches and Feet

The fundamental relationship between inches and feet is that there are 12 inches in 1 foot. This is a fixed conversion factor; it's always 12 inches to 1 foot, regardless of the context. Think of it like this: a ruler is 12 inches long, and that same ruler is also 1 foot long. This simple ratio is the key to all inch-to-foot conversions.

2. The Conversion Process: 99 Inches to Feet

To convert 99 inches to feet, we need to divide the number of inches (99) by the number of inches in a foot (12). This calculation gives us the equivalent length in feet. Mathematically: $99 \text{ inches} / 12 \text{ inches/foot} = 8.25 \text{ feet}$. Therefore, 99 inches is equal to 8.25 feet.

3. Breaking Down the Decimal: Understanding the Remainder

The result, 8.25 feet, contains a decimal part. This decimal represents the remaining inches that don't make up a full foot. To understand this further, let's break it down: 8 feet: This represents 8 full feet, each containing 12 inches ($8 \text{ feet} \times 12 \text{ inches/foot} = 96 \text{ inches}$). 0.25 feet: This is the fractional part. To find out how many inches this represents, we multiply the decimal by 12: $0.25 \text{ feet} \times 12 \text{ inches/foot} = 3 \text{ inches}$. So, 8.25 feet is equivalent to 8 feet and 3 inches.

4. Practical Applications: Real-World Examples

Let's consider some practical scenarios where this conversion is useful: Construction: You're building a bookshelf and need a piece of wood 99 inches long. The lumber yard sells wood in feet. Knowing that 99 inches is 8 feet and 3 inches allows you to order the appropriate length. Sewing: You need 99 inches of fabric for a project. Your fabric store sells material in yards and feet. Converting 99 inches to 8 feet and 3 inches helps you determine the amount of fabric to purchase accurately. Gardening: You're planning a garden bed that needs to be 99 inches long. Understanding the equivalent length in feet helps in planning the layout and purchasing the necessary materials.

5. Beyond 99 Inches: Applying the Conversion Principle

The method for converting inches to feet remains consistent regardless of the initial number of inches. Always divide the number of inches by 12 to find the equivalent length in feet. For instance, to convert 144 inches to feet: $144 \text{ inches} / 12 \text{ inches/foot} = 12 \text{ feet}$.

Key Takeaways:

There are 12 inches in 1 foot. To convert inches to feet, divide the number of inches by 12. The decimal portion of the result represents the remaining inches as a fraction of a foot. This conversion is useful in numerous practical applications.

FAQs:

1. Q: Can I convert feet to inches using the same principle? A: Yes, to convert feet to inches, multiply the number of feet by 12. 2. Q: What if I have a measurement in feet and inches, and I need to convert it to just inches? A: Multiply the number of feet by 12 and add the number of inches. 3. Q: Are there any online converters for inch-to-foot conversions? A: Yes, many online calculators and conversion tools are available for this purpose. 4. Q: Why is this conversion important? A: Understanding unit conversions is crucial for accurate measurements in various fields, ensuring projects are completed correctly and efficiently. 5. Q: Is this conversion applicable only to the imperial system? A: Yes, this conversion specifically applies to the imperial system of measurement (inches and feet). The metric system uses centimeters and meters.
